

VantageLive!™

A seamless solution for ready-to-use mobility data

Benefits of VantageLive!

Collect, present and utilize accurate intersection data while saving time, money and resources

Immediate access to vehicle, bicycle and pedestrian data 24/7

Utilize your existing infrastructure for more value-added features

Make your data come alive

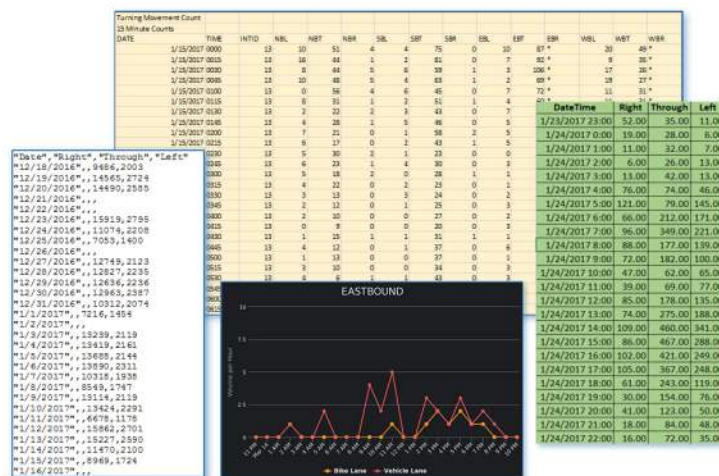

VantageLive! is an easy to use, web-based data service that allows users to view activity at their intersections by automatically collecting and analyzing vehicle, bicycle and pedestrian data. VantageLive! is the first service of its kind to simplify the process of presenting turning movement count data and has the potential to replace most or all temporary data collection efforts.

Utilizing the cloud-based infrastructure, VantageLive! automatically provides regular updates without any effort from the user. The Vantage Data Engine receives data from Iteris Vantage platforms installed throughout the agency and securely sends it to the cloud. Data and information can then be viewed via a web browser by multiple agency personnel; from traffic engineers to the planning department and beyond.

Turning data into insights

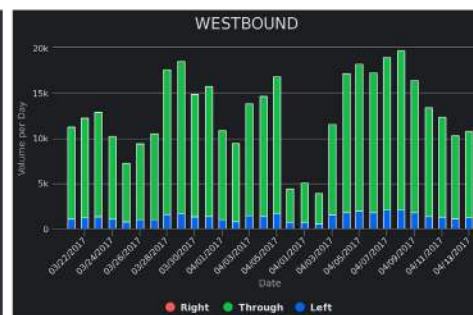

VantageLive! provides a robust data set that can be used for signal timing optimization. Users have the ability to generate both common UDF data and peak hour summary reports with peak hour factor calculations. These reports provide detailed information about turning movements and departing data that will quickly allow engineers and planners to optimize signal timing that was previously done with time consuming manual report generation.

- View and download charts and graphs in various file formats including JPEG, PNG, PDF and SVG
- Export readily available traffic data reports in Excel, CSV or UTDF/Synchro
- Generate multi-day peak hour summary calculations for every intersection
- Customize data by view of daily, weekly, monthly or yearly information
- Review of historical data analysis
- VantageLive! allows for simultaneous, multi-user access
- Seamless integration with Edge®, Vantage Next® and VantageRadius™

A customized peak hour calculation and summary can be generated.

Detailed reports can quickly be viewed and exported in various formats.

Included with Vantagelive! is an intuitive dashboard that displays up-to-date system-wide information on all collected data. Users have the ability to conveniently view vehicle, bicycle and pedestrian volume.
